Paradosso del treno 2:
un treno ha sul suo percorso un passaggio a livello (prima A e poi B) distanti tra loro 1Km.
Nel momento in cui il treno raggiunge B partono due raggi di luce che viaggiano in direzione opposta al treno: il raggio Uno parte dalla punta della locomotiva e viaggia dentro il treno e percorre tutte le carrozze fino ad uscire dalla porta posteriore ed arrivare a A e ci mette tempo t1.
Il raggio Due invece parte da terra e viaggia allâ€™esterno del treno parallelo a Uno e arriva ad A con tempo t2.
I due raggi dovrebbero arrivare al punto A contemporaneamente, no?
Allora abbiamo appurato senza ombra di dubbio che i due raggi arrivano nello stesso istante da A.
Ora, dire che il ragggio Due Ã¨ partito da un sistema inerziale ed Ã¨ arrivato ad a equivale a dire che quando parte Ã¨ come se io (che sono B) faccio partire un raggio che viaggia sulla terra (inerziale e solidale con me) e arriva a A, giusto?
Poi il raggio Uno che parte da un sistema inerziale ma in moto rispetto alla terra e quindi rispetto a A equivale a dire che il raggio parte ma la terra ruota leggerissimamente e sposta un poco B piÃ¹ lontano quindi Uno percorrei 1Km PIÃ™ in briciolo di strada che equivale al movimento della terra: ma abbiamo appurato che i due raggi arrivano a B nel medesimo istante, come Ã¨ possibile allora che Uno abbia percorso un po' piÃ¹ di strada?

Oppure si puÃ² anche dire cosÃ¬:

infatti si potrebbe anche usare un raggio solo ma l'osservatore sul treno vedrebbe il raggio di luce percorrere un tratto di strada piÃ¹ lungo del lungo perchÃ¨, sebbene di poco, il treno avrÃ un po' percorso strada e per lui, sul treno, il raggio avrÃ quindi percorso un po' piÃ¹ di strada...

Spero di essermi fatto capire
ho pensato di farci un'aggiunta che forse puÃ² chiarire: non Ã¨ detto che sÃ¬ debba per forza lanciare un segnale luminoso ma anche un oggetto fisico, una palla, L'osservatore a terra vede la palla andare dalla punta fino al passaggio a livello B e l'osservatore sul treno vede la palla percorrere tutto il treno e poi andare mlte e arrivare a B, ora per l'osservatore sul treno la palla ha percorso la lunghezza del treno piÃ¹ la strada dalla fine a B mentre l'osservatore a terra vede la palla percorrere il tratto dalla punta a B che Ã¨ meno della lunghezza che vede invece l'osservatore sul treno, Ã¨ questo che non mi

torna?- come mai ci sono due lunghezze differenti per lo stesso saggio
di luce?

devi prima scaricare i sorgenti, li scopmpatti, entri dentro al treno A e
dai
/configure & make & make install

prova a semplificare usando un singolo fotone, cosa succede?

> Spero di essermi fatto capire
> ho pensato di farci un'aggiunta che forse puÃƒÂ² chiarire:

mi confonde di piÃ¹, invece ;-P

> L'osservatore a terra vede la palla andare

che punta? la fine del treno?

> ÃƒÅ¡ questo che non mi
> torna

prova con la Slack, 'sti tool automagici a volte incasinano invece di
semplificare;

SarÃ

make confute

piÃ¹ che make install

ERRORE BLU!

Il comando giusto Ã¨:

../configure && make && make install

Come? Un momento! Sulla mia nuova connessione superluminale
a neutrini mi informano che l'opener ha una versione ultrarelativistica
di make che termina prima di battere il tasto return.

ERRORE ROSSO! (arancione dai...)

a casa mia i primi due si danno come $ ed il terzo come #

E a ~ mia invece si da un bel
$./configure --prefix=/home/marco
$make
$make install

Odio spargere in giro roba non gestita da portage

No perchÃ© il raggio 1 viaggia si alla stessa velocitÃ del raggio 2 ma
gli devi togliere la velocitÃ del treno, quindi ci metterÃ piÃ¹ tempo e
la rotazione terrestre non influisce perchÃ© Ã© uguale per tutti e due.

Aaahhhh quanto sono figo :-)
