Subject: Google Sites site as file database

Hello,
I'd like to load a lot of small pdf files to a Sites' site, is there a
facility to handle files with search and additional fields?

I thought about adding all of them to a File Cabinet but that would be
uncomfortable for an user, is there pagination with File Cabinets?

Should I define an own list in order to have additional fields and then
just put a link to file in a field?

I.e. something like "Author, title, details, size, link" fields and a
separate file cabinet to store all files.

Any hint appreciated.
