non ho visto dalle pagine di amministrazione di endian firewall un flag per poter programmare un riavvio, cosi' "a naso" ho editato il file /var/spool/cron/root.orig che copio/incollo

```
SHELL=/bin/bash
```

```
PATH=/sbin:/bin:/usr/sbin:/usr/bin
```

```
MAILTO=
```

```
HOME=/
```

```
#
```

```
&nolog */1 * * * * [-x /bin/run-parts ] && run-parts --report  
/etc/cron.minutely
```

```
&nolog */5 * * * * [-x /bin/run-parts ] && run-parts --report  
/etc/cron.cyclic
```

```
01 * * * * [-x /bin/run-parts ] && run-parts --report /etc/cron.hourly
```

```
25 1 * * * [-x /bin/run-parts ] && run-parts --report /etc/cron.daily
```

```
47 2 * * 0 [-x /bin/run-parts ] && run-parts --report /etc/cron.weekly
```

```
52 3 1 * * [-x /bin/run-parts ] && run-parts --report  
/etc/cron.monthly
```

```
#
```

```
@nolog 5 [-x /bin/run-parts ] && run-parts --report  
/etc/anacron.cyclic
```

```
@ 1h [-x /bin/run-parts ] && run-parts --report /etc/anacron.hourly
```

```
@ 1d [-x /bin/run-parts ] && run-parts --report /etc/anacron.daily
```

```
@ 1w [-x /bin/run-parts ] && run-parts --report /etc/anacron.weekly
```

```
@ 1m [-x /bin/run-parts ] && run-parts --report /etc/anacron.monthly
```

```
# Summarize ip accounting info:
```

```
2 1 * * * /usr/sbin/ipacsum -r -H `/bin/hostname` -t "the day 2  
days ago" >/dev/null
```

```
3 1 * * 0 /usr/sbin/ipacsum -r -H `/bin/hostname` -t "the week 4  
weeks ago" >/dev/null
```

```
4 1 1 2 * /usr/sbin/ipacsum -r -H `/bin/hostname` -t "the year 2  
years ago" >/dev/null
```

```
57 23 * * * [-x /usr/lib/cron/logrotate.cron ] &&  
/usr/lib/cron/logrotate.cron
```

```
# reboot quotidiano
```

```
0 3 * * * /sbin/reboot # riavvio alle 3 del mattino
```

tuttavia il reboot alle 3 del mattino non avviene. semplicemente il sistema ignora la direttiva. Cosa sbaglio?  
grazie
